* Scratch, Shreddage, and Smart Filters are Photoshop's layers with a history of creating and altering raster images that are saved as layers with the Document Set or File Set name. You can change the name of a layer to Image, Layer, Layer 1, Layer 2, Layer 3, or any other name you desire; a layer acts like a bookmark of sorts. * Photo Collage overlays allow you to create an overlay image of any size or shape. You then create a new Photoshop image by overlaying the Photo Collage layer. Photo Collage layers support transparency and have layer masks. Photo Collage layers offer the same editing tools

as Photoshop layers and layers on them. The Photo Collage layer stores its editing history as a history panel. * Mask layers offer the features of Photoshop layers with the ability to create a mask that helps manipulate the overlying Photoshop image. * Retouch Layers let you control any area of a layer through the use of the Brush tool. * Actions are Photoshop's not-so-secret weapon. Actions make it easy to create an image from one set of layers (a Background or Layers image, for example) and then save that set of layers for future use. You use Actions to let you copy, rotate, and resize images without the need to reshape the individual layers. ****Figure 6-1:**** A complex Photoshop art piece was assembled using layers.

Image Tools in Photoshop The tools of Photoshop are what you use to make changes in your image. These tools are available through menus and from the toolbar at any time. Each tool has a default setting. Figure 6-1 offers an example of three tool options in action: on the bottom is the Brush tool, which is the tool of choice for creating and editing images. Dragging the tool can be a little tricky at first, but after you get the hang of it, it's an effective way to add texture to a layer's surface. Click and hold the mouse button to create a shape around an area. The bounding box is often helpful for painting to more evenly distribute the edges of the brush. Figure 6-1 uses the Alt key to toggle it off to create the

bounding box. See Chapter 4 for more on using the Brush tool. The next tool in Figure 6-1 is the eraser (shown on the top left of Figure 6-1). Because it's a hardware key, you may

Q: Error while creating a list and saving it into MongoDB I have a JSON string, which I want to convert into a List and save that object into MongoDB. When I create a list, it compiles but when I try to save the list to the DB it gives me this error: ****Error while processing: { "_id" : ObjectId("56bf8ab597c818d9f924f972"), "value" : ["0.00"] }**** Here is the code:

```
var bytes =
Encoding.UTF8.GetBytes(data); var
stream = new MemoryStream(bytes); var
str = new JsonTextReader(new StreamRe
ader(stream)).ReadAsStringAsync(); var
content =
JsonConvert.DeserializeObject<(str);
```

db.products.insertOne({ _id: data, value: [content] }); What I want to achieve is that when my app starts, this list is created and saved on MongoDB. Thanks. A: I just changed "value" to "array.value" and it worked. db.products.insertOne({ _id: data, array.value: [content] }); /* *
